PROJECT

CLOUD COMPUTING

- Provisioning Infrastructure to Facilitate Containerized Microservice Based High Frequency Trading(HFT) Application using Docker in Google Cloud.
- This project is to provision a containerized HFT application on Google Cloud Platform (GCP) using Docker to improve the efficiency and reliability of HFT applications while

reducing infrastructure costs and improving security.

- The project will achieve this by selecting an appropriate HFT application, creating a Docker file to build the container image, deploying the application on GCP, and configuring networking and storage.
- The application will be deployed and managed using Containers in Google Cloud, which provides a managed, scalable Docker service.
- This will enable the application to be tested and deployed quickly and reliably, ensuring that it can meet the demands of high-frequency trading environments
